Client Requirements

You are a part of a working group that develops digital resources for school students. Your team has been asked to develop a database and later implement it as a source of information to develop a mobile or web application.

The database is to contain reference materials for students on three subjects: art, mathematics and technology. Each subject can have articles with biographies of the key people as well as articles on the major art objects, events and important concepts.

A sample data file is provided with this document (SampleData.xls).

The database can be accessed by administrators, tutors and students with various access levels.

The client would like the database to have the following functionality:

- Students should be able to:
 - Browse articles by category
 - Browse articles by a keyword in the title
- Tutors should be able to:
 - Add or modify articles
- Administrators should be able to:
 - Add, modify or remove articles

As a team, we have decided to use the Agile approach and develop in iterations with the client's approval at the end of each iteration. After a discussion with the client, the following iterations have been agreed upon:

Solution Design Decision

For the database we have decided as a group to use MongoDB.

For the backend of the application, we have decided to use Strappi.IO

For the single page front end of the application, we decided to use React.

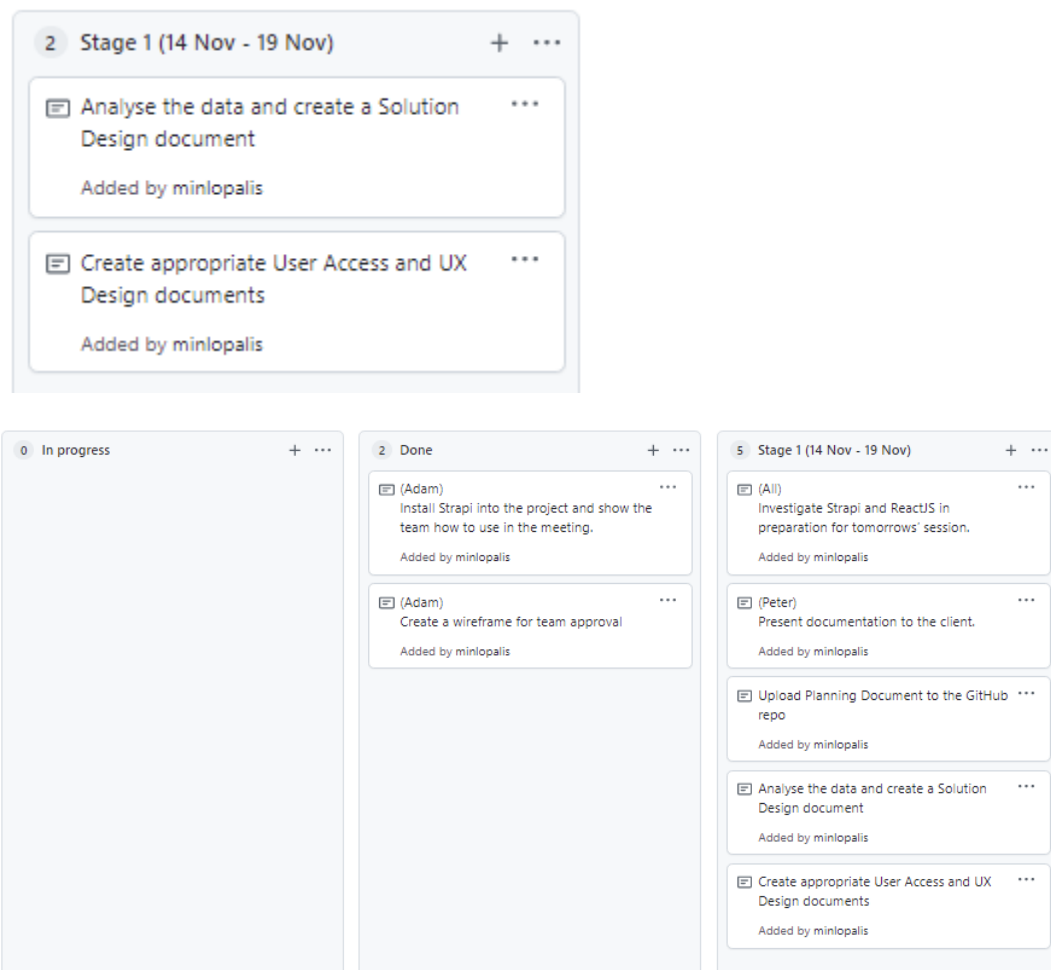

Iteration 1: Developing System Design document

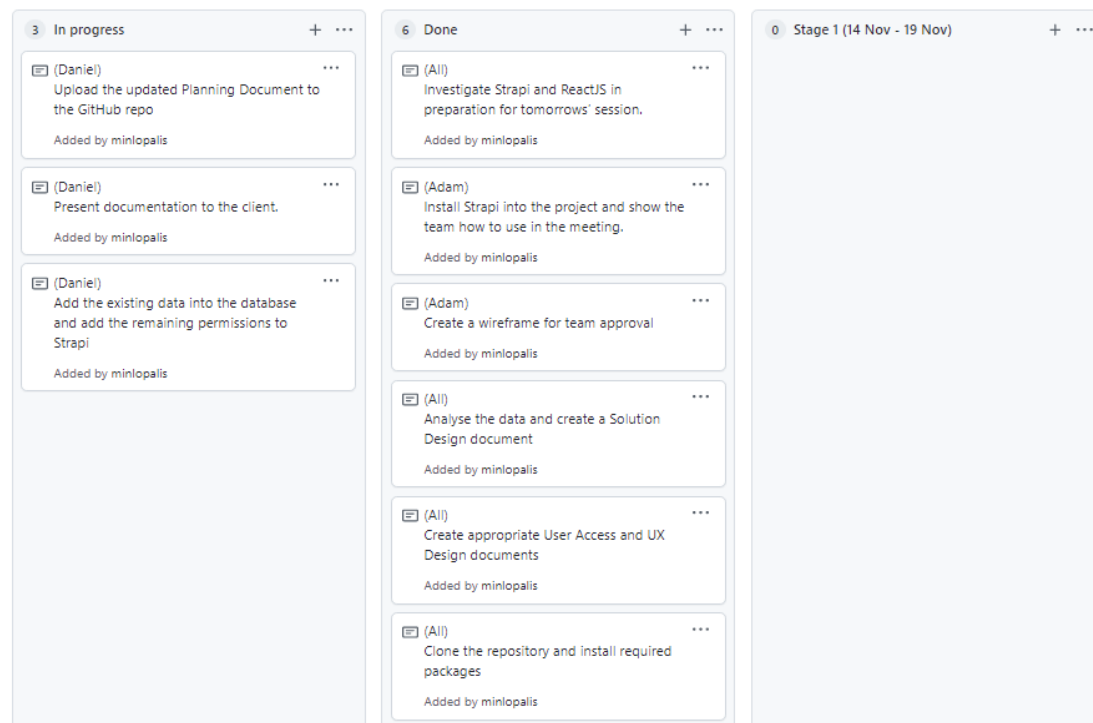

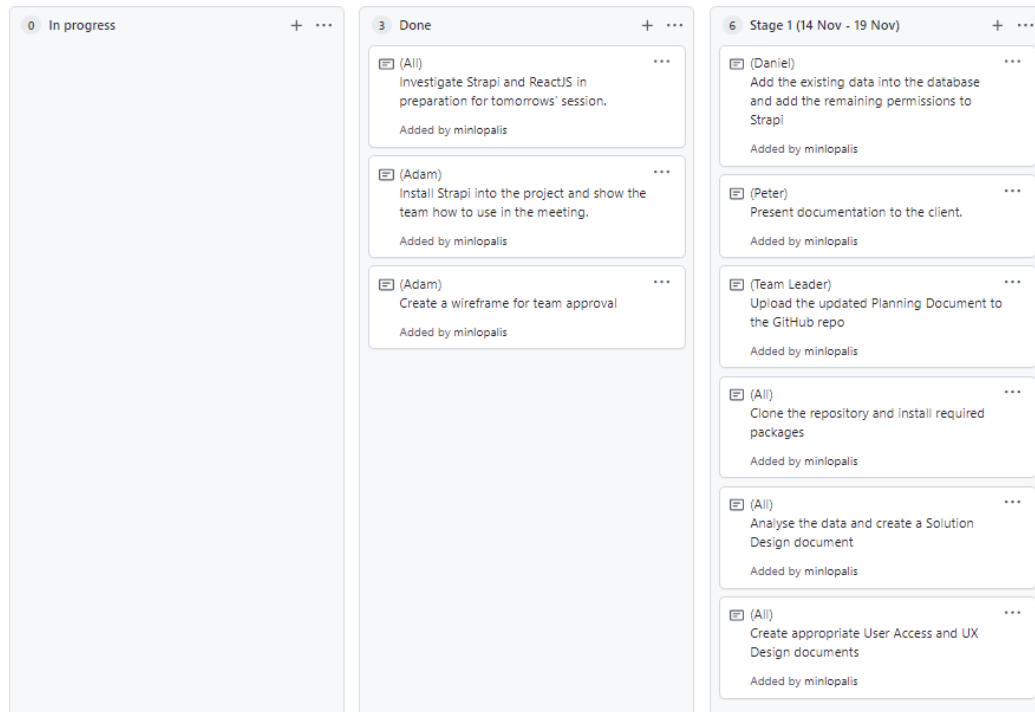

14 November – 19 November 2021

Analyse the data and create a Solution Design document outlining the architecture and database model. Also create appropriate User Access and UX Design documents to implement the database using a web application. For each part of the Solution Design document, provide reasons as to why you selected a particular technology or design.

Task:	Expected Completed Date:	Completed By:	Actual Completed Date:
Analyse the data and create a Solution Design document	17/11/2021	Team	19/11/2021
Create appropriate User Access and UX Design documents	19/11/2021	Team	19/11/2021

Iteration 2: Developing the Database

20 November – 25 November 2021

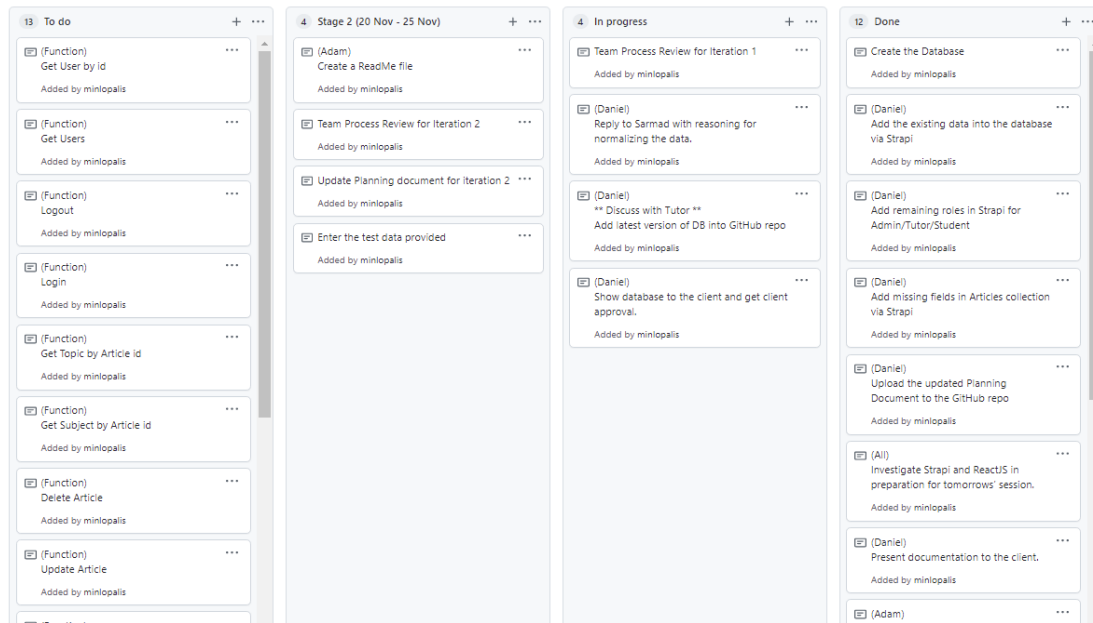

Create the database in the approved database management system. Follow the approved database model to create the appropriate database structure. Enter the test data provided.

Task:	Expected Completed Date:	Completed By:	Actual Completed Date:
Create the database	23/11/2021	Adam Spice	17/11/2021
Enter the test data provided	22/11/2021	Daniel Tibbotts	22/11/2021
Setup the GitHub repository	22/11/2021	Daniel Tibbotts	14/11/2021
Create the ReadMe file	22/11/2021	Peter Stanger	14/11/2021
Show database to client and get approval	24/11/2021	Daniel Tibbotts	23/11/2021

IMPORTANT!
Database Approval Required (Iteration 2)
Hi Sarmad Soomro
As per the project requirements, approval of the Database is required. (refer to below screenshot)

Iteration 2: Developing the Database

Iteration 3: Developing Database Queries

26 November – 30 November 2021

Create and test the appropriate queries as per client requirements.

Task:	Expected Completed Date:	Completed By:	Actual Completed Date:
Create and test the appropriate queries as per client requirements	28/11/2021		

Iteration 4: Implementing Database using Web Application

1 December – 5 December 2021

Create a single page interface (web or mobile) application to implement and test the client requirement for the database queries.

Task:	Expected Completed Date:	Completed By:	Actual Completed Date:
Create a single page interface (web or mobile) application	02/12/2021
